USER GUIDE

Screen Time Control

Everything you need to track children's screen time against a daily limit, in plain language.

Need help? Email mzdigitalbuys@outlook.com

Quick start (5 steps)

1. **Create your account** and confirm your email, then sign in and enter the **licence key** from your purchase when asked.
2. Go to **Children & limits**, press **+ Add child**, and enter a name and a daily limit in minutes.
3. On the **Today's dashboard**, press **Log in / start** on the child's card when they begin using a screen.
4. Press **Log out / stop** when they finish. Do this every time, because the app cannot see the device.
5. Watch the bar. It goes green, then amber, then red as the child gets close to the limit.

What the app does, and what it does not

Screen Time Control is a **tracker for caregivers**. You tell it when a child starts and stops, and it adds up the day, compares it with the daily limit, and shows who is close to or over it.

It does not read the child's phone, tablet or TV. It cannot see what a child is doing, and it cannot lock or switch off a device. The times are the ones you record with the buttons, so the totals are only as accurate as those button presses.

It does not block websites or apps, and it does not monitor what a child watches, plays or types, including chat or language in online games. See Keeping content safe for what to use alongside it.

- Works for one child or many, such as a family or a daycare room.
- Each caregiver has a private account and sees only their own children.
- Several short sessions in a day all count toward one daily allowance. Time between them does not count.

Put it on your phone

There is nothing to download from an app store. Open the app's web address in your phone's browser and add it to your home screen. It then opens like an app, with its own icon.

iPhone or iPad (Safari)

1. Open the app's address in **Safari**.
2. Tap the **Share** button.
3. Choose **Add to Home Screen**, then **Add**.

Android (Chrome)

1. Open the app's address in **Chrome**.
2. Tap the ⋮ menu.
3. Choose **Install app** or **Add to Home screen**.

You need an internet connection to use it. The app does not work offline.

Create your account and sign in

1. On the sign-in page, press **Create an account**.
2. Enter your email and a password of **at least 8 characters**.
3. We send you an email. **Open the link in it** to confirm your address. Check your spam folder if it does not arrive.
4. Go back to the app and press **Sign in** with the same email and password.
5. The first time you sign in you are asked for your **licence key**. Copy it from your Payhip receipt or the email Payhip sent you, paste it in and press **Activate**. You only do this once. **Each key works for one account**, so use the email address you want to keep.

Forgot your password?

1. On the sign-in page, press **Forgot your password?** and enter your email.
2. Open the email we send and press its link. **Open it in the same browser** you asked from.
3. Choose a new password (at least 8 characters) and save it.

Use **Sign out** in the side menu when you are on a shared device.

Add a child and set the daily limit

1. Open **Children & limits** from the menu.
2. Press **+ Add child**.
3. Enter the **name** and the **daily limit in minutes** (from 1 to 1440). Age (0 to 18) and notes are optional.
4. Press **Save child**.

To change a limit or details: press **Edit child & limit** on the child's card, change what you need, write a short **reason for change** (at least 3 characters), and save.

To remove a child: press **Remove child** and give a reason. This also removes all of that child's sessions and cannot be undone.

Tip: the limit applies to every day. If a child needs more time on a special day, raise the limit for that day and set it back afterwards.

Track screen time with the timer

Start

1. On **Today's dashboard**, find the child's card.
2. Choose the **device** (tablet, TV, phone, computer or game console) and the **activity** (educational, video, game, social or browsing).
3. Press **Log in / start**. The card now says “Logged in since…”.

Stop

When the child is off the screen, press **Log out / stop** on their card. The time is added to today's total.

Stopping and starting again

Children often use a screen in several short bursts. Start and stop as often as you like. All of the bursts add up against the **same daily limit**, and the breaks between them are not counted.

One timer per child at a time. A child who is already logged in cannot be started again until you stop them.

> **Remember to press stop.** The app cannot tell when a child puts the device down. If nobody stops the timer it keeps running, until the daily limit or the 3-hour safety stop (see below).

What happens at the daily limit

- **The timer stops by itself.** When a running child reaches their daily limit, the session ends at that exact minute and the bar stays full.
- **A red notice** “Daily limit reached” appears on the dashboard.
- **They cannot start again that day.** Pressing **Log in / start** shows “Daily limit already reached. Raise the limit or try again tomorrow.” If you decide to allow more time, raise their limit under **Children & limits**.
- **3-hour safety stop.** A timer that is left running is closed after 3 hours and recorded as exactly 3 hours, even if the child stopped long before.
- The day starts again at **midnight in your time zone**.

The stop happens while the dashboard is open or the next time it loads. Either way, the recorded time never goes past the limit.

Reminders

- **“Is [name] still on screen?”** appears every 30 minutes while a timer is running. Press **Still on screen** to keep going, or **Stop now** to end the session.
- **“Almost at the daily limit”** appears when 5 minutes or less remain, so you can wrap up before the timer stops.
- The browser tab title also shows a ⏰ while a reminder is waiting.

> **Reminders only show while the app is open** on your phone or computer. The app cannot send notifications when it is closed, so keep it open while a timer runs.

Log a session after the fact

If you forgot to use the timer, add the time by hand.

1. Open **Log session** from the menu.
2. Pick the **child**, **device** and **activity**.
3. Set the **start time** and the **duration in minutes** (1 to 1440). Add a note if you like.
4. Press **Save session**.

Sessions added by hand count toward the day like any other and are not blocked by the limit, so they can take a child over it.

Session history: edit and delete

Open **Children & limits** and scroll to **Session history**. Filter by **child** and by **day**, or press **View history** on a child's card.

- **Edit session** changes the child, device, activity, start time, duration or note. You must write a short reason.
- **Delete session** removes it and changes that day's total. You must give a reason, and it cannot be undone.
- A session that is **still running** cannot be edited. Press **Log out on dashboard**, stop it there, then edit it.
- A record of every change is kept, including your reason.

If the timer ran too long because it was not stopped, edit that session and correct its duration.

Reading the dashboard

The top shows how many children you have, the screen time used today, and how many have reached their limit. Each child has a card with a bar and their minutes used out of their limit.

Colour	Label	Meaning
Green	Looking balanced	Less than 75% of today's limit used.
Amber	Approaching limit	75% to 99% of the limit used.
Red	Limit reached / Over limit	The limit has been reached, or passed (for example by a session added by hand).

Children closest to or over their limit are listed first. Each card also shows the minutes remaining, or how far over the child is.

Keeping content safe

This app tracks **how long** a child is on a screen. It does **not** check **what** they see or say. It has no website blocking, no filtering by age rating, and no monitoring of chat or language in online games.

For that, use the free parental controls that already exist on the devices, games and home network your child uses. Use them **alongside** this app.

You want to…	Use
Track time and keep to a daily limit	This app
Block or approve apps and websites, set age ratings, restrict purchases	The device's own parental controls
Control who can chat with your child in a game	The game or platform's own settings
Filter adult content for every device at home	Your home router or a family-friendly DNS service

On the device

- **Apple iPhone and iPad:** Screen Time, then Content & Privacy Restrictions, to limit apps, web content, age ratings and purchases.
- **Android:** Google Family Link, to approve apps and set content filters.
- **Windows:** Microsoft Family Safety.

In games and video apps

- Open the parental-control or privacy settings for each platform your child uses, such as Xbox, PlayStation, Nintendo Switch, Roblox, Minecraft and YouTube Kids.
- **Check who can message your child.** Where the game allows it, turn chat off or limit it to people you have approved, and require your approval for friend requests.

On your home network

- Many routers have parental controls. You can also use a family-friendly DNS service, for example CleanBrowsing or OpenDNS FamilyShield, to filter adult websites on every device on your Wi-Fi.
- Filters help but are not perfect, and they do not cover mobile data away from home.

Talk with your child

- Agree simple rules together, and keep screens in shared spaces where you can.
- Tell your child they can always come to you if something online upsets or confuses them, and that they will not be in trouble.
- Use the **activity** and **note** fields in this app to keep a record of what they were doing.

Menus and names change from time to time, so check each company's own help pages for the current steps. Screen Time Control is not affiliated with any of the products named here.

Privacy and your data

- Your children and their sessions are **private to your account**. Other users cannot see them.
- Anyone who knows your email and password can see your data, so keep your password to yourself and use **Sign out** on shared devices.
- Removing a child removes their sessions. Only the change record remains.
- Use a first name or nickname if you prefer. The app does not need a child's full name or any other detail.

Questions and fixes

I forgot to stop the timer.

Stop it as soon as you notice. Then open **Children & limits** → **Session history**, press **Edit session** on that session, and set the real duration with a reason.

The child cannot start. It says the daily limit is already reached.

They have used all of today's time. Raise their limit under **Children & limits** if you want to allow more, or wait for tomorrow.

I did not get the confirmation or reset email.

Check your spam folder and wait a few minutes. Make sure the address is spelled correctly. Then try again. If the link says it has expired, request a new one and open it in the same browser.

My licence key is not accepted.

Copy it again from your Payhip receipt or email and paste it exactly, without extra spaces. Letters can be upper or lower case. If it still fails, the key may have been refunded or disabled. Email us the address you used to buy.

It says my licence key has already been used.

Each key activates one account. If you already activated it, sign in with that same account. If you did not, email us with your Payhip order details and we will help.

The totals look wrong, or the day changes at the wrong time.

The day follows the time zone of your phone or computer. Check that its date, time and time zone are correct, then reload the app.

The numbers did not update.

The dashboard refreshes by itself about every 30 seconds. Pull down to reload, or close and reopen the app.

I can't edit a session.

Running sessions can only be stopped, not edited. Stop it first, then edit it from the history.

Can the app block the child's device, or filter what they see?

No. It records and reminds. You decide when the screen goes off. It also does not filter websites or monitor chat, so see Keeping content safe for tools that do.

Does it work without internet?

No. You need a connection to start, stop and see totals.

Still stuck? Email us at mzdigitalbuys@outlook.com and tell us what you were doing and what you saw on the screen.
